We protect your trade fair stand using intelligent video technology.
We provide onsite security.

Easy and safe: Video Surveillance

How it works:

We install high-resolution cameras at your stand or in the ceiling of the hall. As soon as the trade fair closes its doors at night, we activate the video system at your stand. The video cameras cover all angles and supply uninterrupted image flow.

Highly sensitive motion detectors register each action onsite and record any image changes directly to our video surveillance centre. The live image signals are analysed by intelligent software at our centre. The program can differentiate between a hazard alarm and a malfunction message.

Our safety specialist checks the image alert on the monitor and dispatches the security service directly to your stand in the event of a break-in. The image data are stored and may be used to document and identify the perpetrator after a break-in.

State-of-the-art video technology using visible video surveillance serves as a deterrent, as well. At night, you surround your stand with a clearly visible warning tape and use signs to raise awareness of the video surveillance. We provide you with the necessary materials.

Safe and mobile: Onsite security personnel

In addition to the video surveillance, you may also request our security personnel for your trade fair stand. Especially during set-up or for very large trade fair stands, security personnel provide a high degree of mobility onsite. Our security specialists are equipped with a portable surveillance monitor and know exactly what is going on at your stand at all times.

Now that you have a good idea . . .

. . . you are probably curious what other services our video surveillance centre can offer.

Use your image data for marketing purposes, for example!
You will find information in the form "Pictures in Motion".
